Mid-Quality Network

High-Quality Network

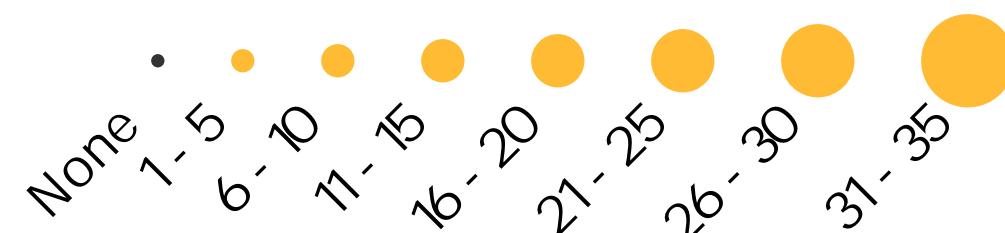

Cycling Accessibility in Hennepin County by Network Quality and Speed

Network Routes:

- High Quality Most comfortable cycling facilities; cycle track, protected bike lane, multi-use path, contraflow bike lane
- Mid Quality All high-quality paths, plus less-protected bike-only facilities; painted bike lane, buffered bike lane, sharrows/shared lanes, bikeable shoulder
- Low Quality All high and mid quality paths, plus local streets

Accessibility Score:

From each point, how many other points can be reached within 30 minutes?

Based on 100 randomly generated points

What is the Hennepin Bike Network?

The "network" available to an individual cyclist depends on their ability, and the quality of infrastructure available to them. Some cyclists are comfortable biking on the street, while others will prefer to stay on safer, more protected facilities. These maps consider the connections possible using different levels of cycling infrastructure at three different average speeds.
